What we did today

✓OWASP TOP 10 presentations

- everybody presented on their subjects + discussion

- slides will be on wiki

✓discussed the schedule

✓discussed some potential vulnerabilities of SIS

✓made Googledoc to document the testing

✓prepared software for testing (Backtrack, Kali)
✓found that live-user/passwords work in the developing environment and there is live data in the dev.environment

What we shall do tomorrow

→ find attack examples for the vulnerabilities

→ try them out on DVWA

→ get familiar with Tamper Data, Kali and Backtrack

→ familiarise ourselves with XSS, Injection, CSRF before testing SIS

→ see how to get authentication info from POST and GET
